DETAILED ACTION

Election/Restrictions

Applicant's election of Specie I in the reply filed on January 26, 2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

According, claims 3-7 are canceled.

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

QUAYLE

This application is in condition for allowance except for the following formal matters:

Claim Objections

Claims 8, 9 are objected to because of the following informalities:

Art Unit: 2817

Claim 8, page 38, line 1, "1, 2, 3, 4, 5, 6, or 7" should correctly be -- 1 --. Note, claims 3-7 are nonelected claims while claim 2 does not disclose "the comparator and the switch circuit" claimed.

Claim 9, page 38, line 2, "1, 2, 3, 4, 5, 6, or 7" should correctly be -- 1 or 2 --. Note, claims 3-7 are nonelected claims.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

Claims 1, 2, 8, 9 are allowed.

Claims 1, 2, 8, 9 call for, among others, first and second level shift circuits (8, 9), a comparator (13) and a switching circuit (12) having the functions as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Huijsing et al. (4,918,398); Miyashita et al. (5,886,578)) show further analogous prior art circuitry having level shift circuits, but they lack the comparator and switching circuit as claimed.
